

Bee Candy

All the quantities are 'about'

-15-16 pounds of sugar

-3 cups water

-1 tablespoon white vinegar (helps prevent molding)

Pour 2 bags of sugar into a very large container. Gradually add about half the water, stirring to wet the sugar well. Continue to add sugar and water until all the sugar is wet.

Put newspaper or waxed paper in your candy board and fill with wet sugar. Tamp it down. Use something (like a small 2x4) to block the opening so the bees will have an upper entrance. Make sure the sugar is level or below the top of the frame. Allow to harden overnight. Place on a garbage bag while it hardens so the floor or carpet doesn't get sticky.

Remove the inner cover. Put the candy board in its place, screen down. Put the top cover on.

You can easily raise the top cover any time and slip in additional sugar bricks if you need them.
